

App Story Board

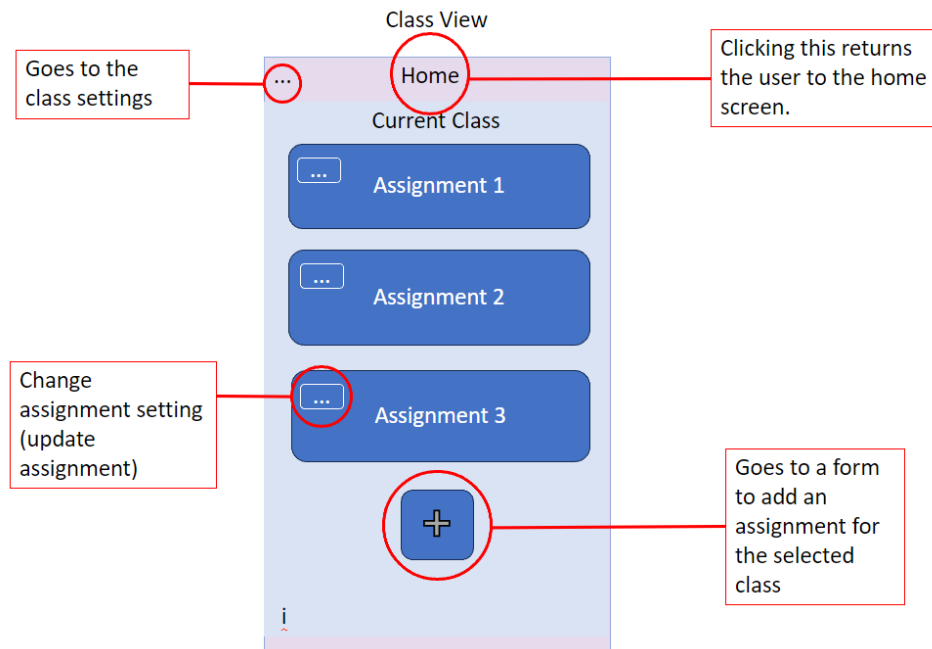

Maiya Minatani

The home screen is going to feature the user's most relevant information. This includes loading the user selected current term. Of the information stored within this app, the least volatile information important to the user is going to be the term they are currently in for school which will usually last anywhere from 10 weeks to 6 months depending on school structure. From there, each class they are currently taking will be displayed on the home screen, where they can easily choose a class and its associated data (assignments.) The home screen will also allow the user to open a menu to that allows the user to add a new term, select a new term, or view more detailed and streamlined data about from the app. The user will also be able to add a new class to their term, which will direct the user to a form to fill out required class data to submit. The user will also be able to direct themselves toward a detailed term information page where they will be able to update the current terms data.

When the user selects a class from the home screen, this is the layout of what they will see. The user will have an overview of the current assignments for the selected class that they are in. This will be useful to the user because they can easily view assignments they need to complete for the class. From here, the user can also add a new assignment to be added to the class or update current assignment information. They can also go to the class settings, or back to the home screen.

From the home screen, the user can select a drop-down menu that allows them to go to several pages. The user will be able to go back to the home screen, add a new term, view a list of all terms, view a list of all classes, and view a list of all assignments. The user will also be able to access the apps settings from this menu. The lists are featured in the remainder of this document.

Summary

The purpose of this app is to host user-entries of Terms, Courses, and Assignments and present it in an informative and user-friendly manner. This app can be used for time management, task tracking, and reminders as well as being customizable. The story board featured in the document is only the first version, and revisions will be written as the app is designed.
